

Dear Sir or Madam,

I was one of the awardees of ICLAS Regional Fellowship Training Program of 2017. I had visited Biomedical Research Foundation, Center for Experimental Surgery, Academy of Athens in Greece.

My aim was to increase my theoretical and practical knowledge and I manage to succeed under the guidance of Prof. Nikolaos Kostomitsopoulos. I had chance to gain information about the ethical regulations in Europe and how it is practiced. I had opportunity to observe some research studies and had chance to practice endotracheal intubation in mice and rats under guidance of Evangelos Balafas, MSc. I have observed the work flow of the transgenic mice housing section to gain information about transgenic animal housing and care.

I will share my experiences with my colleagues during a meeting; unfortunately we couldn't arrange a date that suits everyone yet. In this meeting we will also plan a suitable time for practicing endotracheal intubation with PhD candidates.

During my stay, I also gave information about our facility, about the studies taking place in our facility and our studies as laboratory animal department. Sharing information about our studies gave us some ideas to plan a common project.

With The ICLAS Fellowship program I learned a new practice, a new point of view for handling administrative duties and collaboration plans for the future. I thank to ICLAS Board for this opportunity.
